HTML Element

An **HTML element**

An HTML element **content**

An HTML element starts with a **Start Tag**

An HTML element ends with a **End Tag**

Empty HTML Element

An **HTML element**

An HTML element **content**

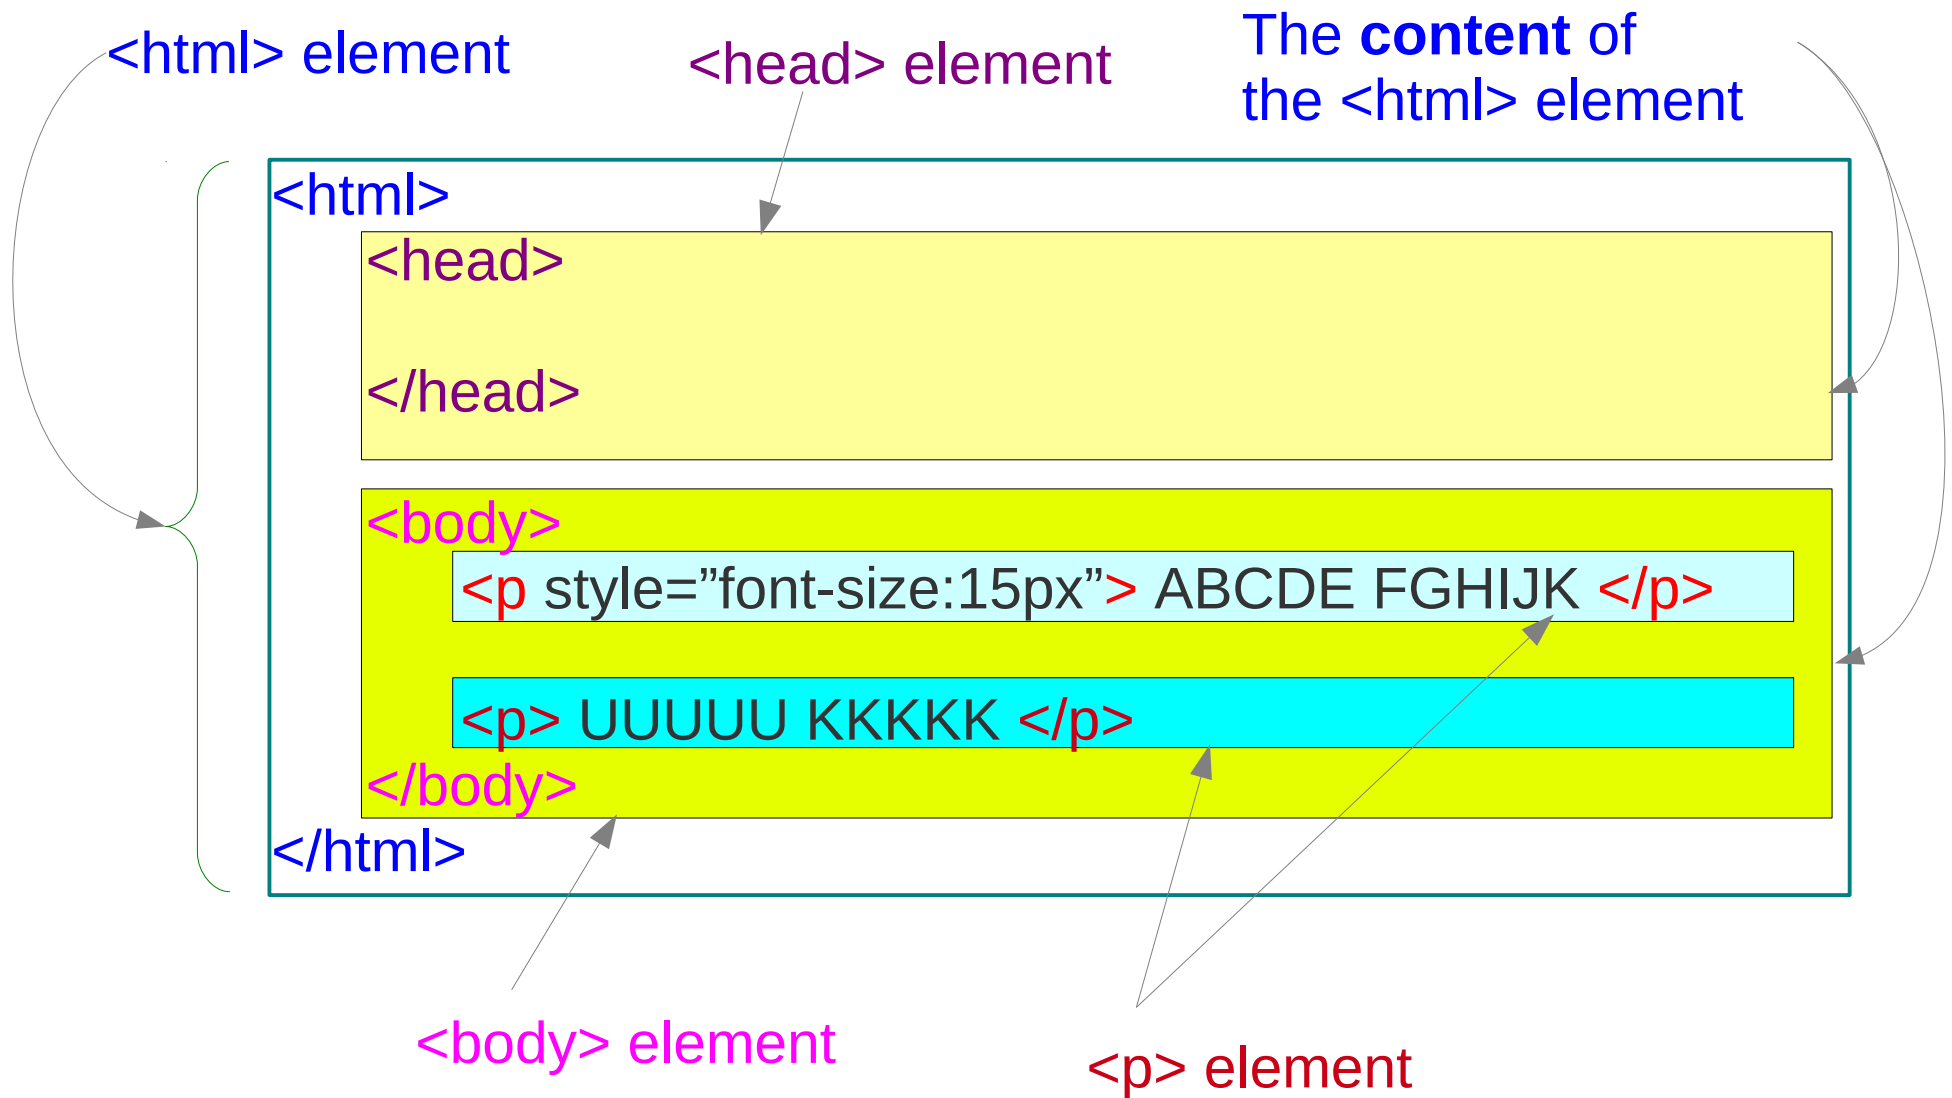

An HTML element starts with a **Start Tag**

An HTML element ends with a **End Tag**

An **Empty HTML element**

Nested HTML Elements

HTML Block & Inline Elements

HTML Block Elements

Most HTML elements

Involves a new line

`<p>` `` `` `<h1>` ...

`<div>`

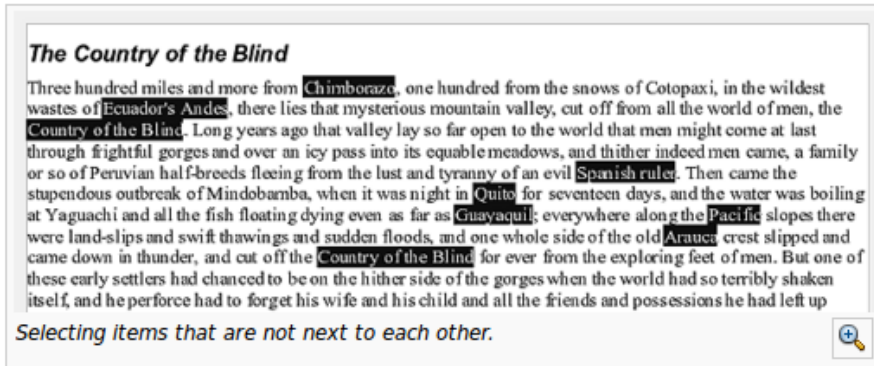

HTML Inline Elements

There is no line break

`` `<a>` `<image>` `<td>` ...

``

 HTML Element (1)

Similar to selecting text in a word processor
After Selecting regions of a text,
Change the font color, the font size,
the background color, etc ...

To select non-consecutive items using the keyboard:

1. Select the first piece of text. (For more information about keyboard selection of text, see the topic "Navigating and selecting with the keyboard" in the OpenOffice.org Help (F1).)
2. Press *Shift+F8*. This puts Writer in "Add" mode. The word ADD appears on the status bar.
3. Use the arrow keys to move to the start of the next piece of text to be selected. Hold down the *Shift* key and select the next piece of text.
4. Repeat as often as needed.

Now you can work with the selected text.

Press *Esc* to exit from this mode.

- **In-line element**
- **Used as a container for text**

 HTML Element - No Style

No visual effect

t.html

```
<html>
<head>
  
</head>

<body>
<p> ABCDE <span>FGHIJK </p>
<p> UUUUU KKKKK </p>

</body>
```

<p> Most HTML elements signify the specific meaning of their content – i.e. the element describes, and can be made to function according to, the type of data contained within. </p>

 HTML Element - Inline Style

t.html

```
<html>
<head>
  [redacted]
</head>

<body>
<p> ABCDE <span>FGHIJK </p>
<p> UUUUU KKKKK </p>
  [redacted]
</body>
```

<p> Most `` HTML elements `` signify the specific meaning of their content – i.e. the element describes, and can be made to function according to, the type of data contained within. `</p>`

 HTML Element - Internal Style

```
<style type="text/css"
.A1 {font-size:20px}
</style>
```

#A1

t.html

```
<html>
<head>
</head>
<body>
<p> ABCDE <span>FGHIJK </p>
<p> UUUUU KKKKK </p>
</body>
```

Most **** HTML elements **** signify the specific meaning of their content – i.e. the element describes, and can be made to function according to, the type of data contained within. **</p>**

 HTML Element - External Style

```
<head>

<head>  
</head>  
  
<body>  
<p> ABCDE <span>FGHIJK </p>  
<p> UUUUU KKKKK </p>  
</body>
```

mystyle.css

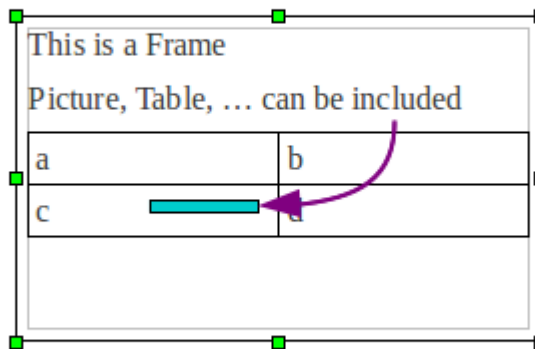

```
.A1 {font-size:20px}
```

<p> Most HTML elements signify the specific meaning of their content – i.e. the element describes, and can be made to function according to, the type of data contained within. </p>

<div> HTML Element

Markup Language (HTML) is the main markup language for displaying web content that can be displayed in a web browser.

Written in the form of HTML tags enclosed in angle brackets (< and >). The first tag in a pair is the opening tag, and the second is the closing tag. In addition, you can add text, images, and other content.

form of HTML tags enclosed in angle brackets (< and >). The first tag in a pair is the opening tag, and the second is the closing tag. In addition, you can add text, images, and other content.

Similar to a frame in a word processor

Can group texts, graphs, tables, pictures into a one unit by using a frame

The purpose of a web browser is to read HTML documents and compose them into visible content. The browser does not display the HTML tags, but uses the tags to interpret the content.

- **Block element**
- **Used as a container for grouping HTML elements**
- **Used also for document layout**
